PROFESSIONAL SUMMARY

Remote freelancer since 2024 helping small businesses in the US and Europe get found, get more customers and save hours on repetitive work. I build the whole system: the website or web app, the n8n automation that replies to and routes every enquiry, the CRM view the team works from, and the AI video ads that bring people in. Computer Engineering graduate who ships working, tested systems and explains them in plain language. Clients rate my work 5.0 out of 5 across 11 client reviews, with five-star reviews on every video project. I work independently and asynchronously, with written updates and recorded walkthroughs, and I am available across US and European working hours. I can start immediately.

CORE SKILLS

- **Automation:** n8n (self-hosted on Railway and AWS), Make, Zapier, ManyChat, webhooks, REST APIs, Google Sheets, Gmail, lead capture and CRM workflows.
- **AI:** AI chat assistants and agents, Claude (Claude Code and the Anthropic API), OpenAI and Gemini APIs, MCP connectors, prompt design, Ollama (local models), ElevenLabs voice.
- **Web and apps:** HTML, CSS, JavaScript, Lovable, Supabase, Firebase, Vercel, Shopify store redesign, Git and GitHub, Lighthouse and SEO checks.
- **Scripting and tools:** Python (NumPy, OpenCV, Pillow, openpyxl, WhisperX), Node.js, Playwright browser automation, FFmpeg video processing, Hyperframes, Docker, SQLite.
- **AI video:** Kling, Veo, Sora, Seedance, Runway, Higgsfield, GPT Image, HeyGen, CapCut, Premiere Pro, After Effects.
- **Remote work:** asynchronous communication, recorded walkthroughs, written handover documents, US and European time zone overlap.

PROFESSIONAL EXPERIENCE

Freelance AI Automation and Web Developer

Self-employed, Remote | 2024 to Present

- Built and run a lead outreach system of 5 connected n8n workflows on Railway: it checks for new leads every 5 minutes, audits each lead's online store (page speed, SEO, ad tracking), picks the right offer with a clear rule, sends from 10 rotated Gmail accounts, and tracks replies and bounces. From 27 September to 11 November 2026 it sent 4,544 first emails and 3,049 follow-ups, 163 store owners replied (about 3.6%), and 175 bounced addresses were blocked from further sends automatically.
- Added a step that saves a ready second reply, with proof images, as a Gmail draft in the lead's thread for my approval, and built a Reddit job alert that checks hiring posts every 30 minutes and emails me one digest of matches.
- Built a content system for a client's 5 TikTok accounts on their own AWS-hosted n8n: Gemini-written scripts, image-to-video generation on rented GPUs, scheduled posting and a daily summary email.
- Diagnosed why 7 of 9 AI requests failed in that system (a free-tier usage limit), explained the fix, and gave the client cost figures (about 1 cent per script and 3 to 4 cents per video) before they scaled up.
- Fixed a client's Google Sheets to Facebook workflow that was publishing duplicate posts, a client's AI video workflow that kept failing at the generation, merging and publishing steps, and a client's article-processing workflow (link extraction, text cleaning, duplicate URLs).
- Reviewed a client's plan for hundreds of automated web pages and AI phone calls, identified steps that would break Google's guidelines and US calling-consent rules, and proposed compliant alternatives.

- Designed and built a premium brand website for client NOMA Home Essentials (product range and trade enquiries), deployed on Vercel.
- Built a website lead system that replies to every new enquiry automatically within about one second and records each lead in a spreadsheet.
- Built 8 ManyChat flows for Instagram that answer common questions, qualify leads, tag them and alert the owner.
- Recorded a voiced walkthrough of every delivered system, working asynchronously across US and European time zones. Rated 5.0 across 11 client reviews and five stars on every video project. One client wrote: "Communication was clear, professional, and patient throughout."

Freelance AI Video Producer
Self-employed, Remote | 2024 to Present

- Produce AI video ads for e-commerce and service brands (product films, presenter explainers, 3D and clay animation): write the hook, script and shot list, generate each scene, then edit, caption and deliver for TikTok, Reels and Shorts.
- Review every AI-generated script, image and clip before delivery for factual mistakes, details that change between shots and claims a brand cannot support.
- Built a published portfolio of 50+ AI videos: cinematic short films and trailers (including history documentaries), UGC ads, product commercials, avatar explainers, social reels and music videos, several for paying clients.
- Changed my process to match start and end frames after finding that a video model ignored final-scene instructions without an end frame.

SELECTED PROJECTS

- **Online store audit and rebuild (redesign concept for a real business):** rebuilt a live Shopify store with the same products and brand. Mobile Lighthouse performance score rose from 78 to 97 and load time fell from 4.3 to 1.8 seconds.
- **Lead capture website and CRM (concept build, Lovable):** 18-page home services website with a quote form connected to an n8n workflow, a data table and a lead inbox, tested end to end.
- **AI receptionist (concept build):** website chat assistant on Gemini that books appointments, with a scripted fallback when the AI is unavailable and an email to the owner for each booking.
- **AI ad script studio (concept build):** web app that writes ad scripts from a product description using n8n and Gemini.
- **Portfolio of 14 projects at isaacchris.com:** includes 7 n8n systems (lead outreach, store email follow-ups, AI ad studio, website lead capture, AI receptionist, TikTok video system, Facebook posting fix), plus websites, an iOS app design and AI ad films.
- **VegaLeads (own tool):** local lead-generation app on Docker with SQLite and a local AI model (Ollama) for scoring and notes.
- **FastPay (app design):** iOS invoice-maker app with 22 designed screens and a clickable prototype.
- **Personal website, isaacchris.com:** hand-coded site with Lighthouse scores of 95 to 100; its contact form feeds an n8n workflow that emails every lead back within 60 seconds.

EDUCATION

Bachelor of Engineering (BEng), Computer Engineering
Federal University of Technology Akure (FUTA) | 2018 to 2023

ADDITIONAL INFORMATION

- Languages: English (fluent).
- Work style: remote, independent, comfortable with written instructions and asynchronous work; available across US and European working hours.
- Availability: can start immediately.
